COMMERCIAL AND FINANCIAL

Damaging Weather in the Winter Wheat Belt Stiffens Prices.

THAT CEREAL RULES QUITE ACTIVE

Corn Onens Wenk on Large Receipts and Reductions in Railroad Rates Throughout the West on Grain.

CHICAGO, July El-An advance of 1%c in wheat at St. Louis, together with damag-ing weather in the winter wheat belt, stiffened the market here today, September closed steady at 58%c, or 16c over yesterweak beginning. Oats and provisions were likewise displaying considerable firmness. Wheat ruled quite active during the early hours, but little interest was

played later, the range for the day being from 4c to 5c. The feeling manifested at the start was quite strong and the market after opening where it left off yesterday advanced from the to the, eased off from the to the, changed some and closed with from to be advance. The market received its initial strength from the weather map, which showed a renewal of the rains in the winter wheat belt, especially in Nebraska. rather steady tone of cables also lent some strength to the market, early advices quoting but 34d decline. The out inspection here was quite liberal and St. Louis strong and higher, and also aided in the advance. St. Louis was an active buyer early, but sold December later. North-western receipts were moderate. The market was further helped by the weather forecast, which predicted showers for northern Illinois tunight and Saturday cooler. Closing Liverpool cables quoted spot steady and unchanged and futures steady to \(\frac{1}{2}\) dower. Duluth stocks are expected to decrease this week 255,000 bu.

Corn opened weak on the large receipts. The reduction in rates by some of the western roads to meet the rate of competitors was also a factor, as were the rains west and favorable crop prospects. First trades showed \(\frac{1}{2}\) c cased off from \(\frac{1}{2}\) c to \(\frac{1}{2}\) c, changed some and closed with \(\frac{1}{2}\) c to \(\frac{1}{2}\) c, changed some and closed with \(\frac{1}{2}\) c gain. A feature was the absence of the free selling by elevator concerns so pronounced of late, country acceptances being comparatively small, and this encouraged room traders, who purchased freely and turned the market.

Oats were fairly active and unsettled. The opening was rather easy, but advanced \(\frac{1}{2}\) c with wheat and corn and on good buying was rother easy, but advanced \(\frac{1}{2}\) c with wheat and corn and on good buying by local parties. Outside figures were not maintained, as the buying was not strong enough to take the increased offerings, and prices reacted from \(\frac{1}{2}\) c 10 \(\frac{1}{2}\) c in sympathy with wheat and corn good buying to frain in the west and prodictions of more were taken as a "builtsh" buffuence and stimulated the early buying.

The provision market opened firm on the sold December later. North-cipts were moderate. The mar-

provision market opened firm on the The provision market opened firm on the small receipts of hogs. Shorts covered freely and in the end September showed an advance of 125c for the day and July 15c. Ribs were almost equally as strong, closing 75c higher for September. Lard shared only slightly in the advance, September closing today at from \$3.25 to \$3.25%, against \$3.17% yesterday, whereas pork closed at \$5.12% yesterday and left off today at \$6.25. Ribs for September closed at \$5.27%, against \$3.20 on the day before. Trading was fairly active.

Trading was fairly active.
Estimated receipts for tomorrow are:
Wheat, 155 cars; corn, 1,058 cars; oats, 326
cars; bogs, 8,000 head. The leading futures ranged as follows: Articles | O. ra. | High. | Low. | Closs.

the whole excellent, have received scent attention, and the street is just particularly impressed with the outlook for railroad earnings, in view of both shrinkage of moreomitic business and consequent failling off of traffic. The failures of the actual marker have been mainly the stocks which are the favorities of speculative and professional manipulation, notably Sugar. Conditions Are Now Favorable for a Good

NEW YORK, July 311-Bradetreet's formerow will say: Political uncertainty continues to exert an untavorable effect on trade and indus-Prospects of large Crops of Corn and Cotton Continue to Be Excellent

Lower Rates Bring Grain

to Market.

NEW YORK, July IL—R. G. Dun & Co.'s weekly review of trade, which issues to-morrow, will say: Business conditions have clearly improved though business has not it is the torpid season and better prosperis have little effect as yet. The signing of a compact to control foreign exchange by a syndicate pledging the use of \$15,000,000 for that purpose may render it unnecessary to use the gold and has given some stocks a light advance. Gold exports have been stopped and foreign trade is more promising of an early demand for our product.

The prospects for large crops of corn and cotton are still excellent. Two important habor contests have been settled—between habor and mercantile lifes are unusually dull |

strong and strong and

There was a further recovery in the stock markets today, itself-line Americans. People are now asking themselves what the recent scare has been about, and nobody seems to have a satisfactory answer. In regard to Americans there has been cause for apprehension, but the position in regard to other markets has been.

ly exaggerated. Paris is much more chem-ing it is understood that the account which been troubling operators is now arranged. It also displayed more steadiness.

GOVERNMENT CROP BULLETIN,

Conditions at the Reginning of the Week Were Most Favorable, WASHINGTON, July 28.—The week ending July 27 was warmer their usual over the southern a extreme southern Florida, where it slightly cooler than the average, and slong the west gulf coast, where the temperature was normal. From Oklahoma and northern Texas eastward over Arkansas. Tempesse and the Seergia, including the western portions of the ranged from 3 to 6 degrees, being the greatest over Arkansas.

Along the immediate Pacafic coast, in northern New Empland, and over portions of the size region and middle Atlantic states, the average daily temperature for the week was nearly notine.

The week was decidedly cooler than usual from the upper Mississippi valley westward to believe and eastern Washington, the average daily deactedly in temperature growning ranging from 5 to 12 degrees, being most marked over the Dakwas and eastern Mediaha. Over the southern

desiciency in temperature generally sanging from to 12 degrees, being most marked over the Darkovas and eastern Mostaina. Over the southern plateau region the week averaged from 3 to 5 degrees ecooler than upual.

East of the Rocky mountains the temperature extremes of the week were 33 degrees at Williamson N. D., on the 22d tl degrees lower than any previous record for the last decade of July, and 122 degrees at Little Rock. Ark. on the 24th, which was 2 degrees above the binnest previously recorded during the last decade of July. From the central Mississippi valley eastward over the Ohio valley and southern portions of the last region to the middle Atlantic and New England coasts, the rainfail during the week ending July 2 exceeded the average, the actual fall being dechledly heavy in the central Mississippi and Ohio valleys, over much of which region it ranged from two to four inches, Implied areas receiving from eix to eight inches, The rainfail was also very heavy in lows. Neutraska and northeastern Colorado, and light showers fell over central and southern California, where precipitation rarely occurs in July. From the upper Missouri valley eastward over Minnesona and the extreme meithern battern, with the exception of portions of Florida, the weekly rainfail is decidedly below the average, the deficiency ranging from one-half inch to more than one inch, a considerable area receiving no measurable amount.

In the states of the central valleys and on the Atlantic and east Guif coasts the week has been very favorable for all growing crops, but excessive rains have to some extent retarded farm work, threshing particularly, and caused much injury to grain in shock. Heavy rains

In the states of the central valleys and on the Atlantic and east Gulf cossis the week has been very favorable for all growing crops, but excessive rains have to some extent retarded farm work, threshing particularly, and caused much injury to grain in shoot. Heavy rains have also injured crops in the Othio valley, especially in West Virginia, where local freshess nave been very destructive.

Drouth continues in northern Michigan, Louisians, Arkansas, and in a few of the southwestern counties of Missouri. In northern Louisians, partures and all crops have suffered seriously from drouth and water for stock is scarce. Although corn has suffered to some extent from heavy rains in the states of the Ohio and centra. Mississippi valleys and from drouth in southwestern Missouri, Arkansas, Louisians and Teyms, the general outlook for an exceptionally fine erop contlines promising. In Kansas much of the crop is now made, and in Nebraska it is in unusually fine condition. Indiana rejusts "a great crop almost assured."

Over the eastern portion of the conton region and in Terus, cotton has made good growth, tut in Forthern Louisiana it is suffering from drouth, and complaints of rust and shedding are quite general. Picking has begun in Plorida, is about to commence in Alabama and continues in Texas and Arkansas.

Spoing wheat has experienced favorable weather conditions in Minneson and South Dakota and the early sown has semewhat improved in North Pukota, but in that state late sown did not head, and is being plowed up. Spring wheat harvical has begun in South Dakota and the scrip is missing powed up. The general condition of tobacce continues of maryland much earlier than usual.

South Dakota Crops.

South Dakota Crops.

HURON S. D., July 21.—Weekly crop bulletin No. 17 of the South Dakota section of the climate and crop service of the weather bureau for the week ending July 27, 1836, says: The temperature during the week was considerably below the normal, with rood days and highly selected the temperature during the week was considerably below the normal, with rood days and highly senerally and not, as a rule, much brisk or high wind. Fair to heavy showers occurred ever most sections of the state. Over the southeast portion good answers were quite general. There are some localities, however, where the rains were light and crops still need moisture. There was considerable cloudiness during the week, especially at night. The cool weather, with cloudiness and the rain, was very favorable to wheat and onts especially the latter—flax, millet, late spotatoes, genesses and corn, generally, and especially in the localities where last week the crops were being adversed by dry and warm weather. The rapid ripening of the more advanced wheat and onts was more or less meeked and the filling of the latter assisted. The wheat and outs that have been harvested are reported a good cop generally, and in a number of localities very good. The condition in this particular, however, appears uneven. There are large areas in some counties where all grain is excellent, while olders report conditions as to quality and yield uneven. Earley harvest is still in progress in the more northern counties, and reports of barley and rye yields are quite uniform as to their being very good to excellent. These crops had the benefit before maturity of almost continuous favorable weather conditions and were practically made before the season showed signs of partial lack of moisture, except in a few localities. Not-withstanding cool weather at its present stage is not considered host for corn, this crop is-reported as having done well during the week quite generally, and especially in localities where it was adversely affected by dry, warm weather preceding. Ears are forming generally. In the more southern counties silking is reported and in a few localities the cars are 'lopping.' Late potatoes were benefited quite generally by the weather conditions during the week. In the contral and southern counties early potatoes are mostly matured, with very good yield and excellent quality except in limited localities. Flax and millet were much benefited and continue quite generally to promise well. A little of the earliest flax is reported harvested in Clay county reports some grain considerably lodged. A destructive hall storm visited a portion of Brown county, doing considerable damage locally. It appears from reports that the best grain is that which was the best 'jui in' or sown. Haying continues, more than the usual amount is being put up, and, as indicated by preceding bulleting, the crop is alundant and quality excellent in most counties east of the Missouri river.
